Sciatic Discomfort - Quick Tips To Help Keep Your Sanity

If you have ever suffered from Sciatica or Sciatic Nerve problems you will know how uncomfortable and painful this condition can be. Sitting to eat dinner, driving the car, even sleeping can be greatly affected by sciatic pain and unlike many other joint or muscle problems it is simply not possible to isolate and immobilize the affected area until your body has had a chance to heal itself but if you follow these couple of tips you will have the best chance at keeping your sanity!

Sciatic Discomfort - Quick Tips To Help Keep Your Sanity

This is because without them carrying out any kind of exercise or movement the muscles in the back and their spine will lose its condition and will then find it very difficult to support the back properly. The weakening of the back could lead to injuries and this will only then increase the amount of pain that the person is feeling.

The pain brought upon by sciatica is usually a cause by considerable factors like compressions on the nerve roots, and inflammation of the disc material. It is possible to gain quick relief from such anti-inflammatory medications, as they help to reduce the swelling or the inflammation, therefore, pressure on the nerve roots also will be resolved.

Many of the sciatica exercises you will see being presented to you by your doctor, health care provider or by websites providing information on exercises for treating this problem will focus on strengthening both the muscles in your back and abdomen. By strengthening these muscles a person is actually providing their back with more support.

Although many people may feel that bed rest is the best way for treating sciatica this is simply not true. Yes resting for a day or two can help to relieve the pain felt when the sciatica flares up but after that, because a person has become inactive, they will find that the pain actually becomes much worse.

Arthritis Pain Relief provides detailed information on Pain Relief, Arthritis Pain Relief, Back Pain Relief, Joint Pain Relief and more. Arthritis Pain Relief is affiliated with Chronic Pain Management.

To avoid the need for ongoing usage of the oral steroids for sciatica, exercises and physical therapies are beneficial and will provide a long term rehabilitation and hopefully a cure for the herniated disc problem. At the start of the program, the physical therapist may apply some modalities like ice or heat compress or ultrasound to decrease muscle spasm.

Physical therapy and chiropractic care ease the painful symptoms of sciatica and work as correctives to prevent future recurrences of the condition by helping to strengthen and tone the lower back.

Conclusion The typical and often first recommended sciatica pain relief treatment is simply bed rest. But like any other medical conditions, herniated disc symptoms can be manifested in a lot of different ways, depending on the person and his/her lifestyle specifically related to exercise. In most serious conditions where nothing seemed to effectively work regardless of whatever techniques you applied, injections and oral steroids can be an option and should be explored. Implementing an ongoing system of physical strengthening exercises in conjunction with the steroids will see a remarkable improvement in most herniated disc conditions. Oral steroids for a herniated disc help with the pain and the swelling at the same time. If nothing is working and the pain of the herniated disc persists it may be well worth considering surgery as an option.

The term "sciatica" refers to pain along a specific nerve - the sciatic nerve, which runs from your lower back down through each leg. It usually caused by a wayward vertebral disc, more commonly referred to as a pinched nerve or a herniated, ruptured, or slipped disc that has shifted from its normal position in the vertebral column and is putting pressure on the radicular nerve (nerve root), which connects to the sciatic nerve.

Other non-invasive mode of treatment is the cervical traction in which, it lifts off the pressure on the nerve roots. However, this is not guaranteed to work perfectly well for everybody and is completely reliant on the health condition and age of the patient suffering from the herniated disc. This is however a reasonably simple method to implement. A home traction kit device may be conveniently used by patients who respond positively to this form of treatment, to help them cope with the pain associated with a herniated disc.

At-home remedies such as heat and ice packs often work wonders to alleviate pain and reduce inflammation. They should be used in twenty minute intervals every couple of hours for optimum effect. Over-the-counter or prescription medications such as acetaminophen (Tylenol) may also bring sciatica pain relief. Non-steroidal anti-inflammatory drugs (NSAIDs) can be particularly helpful in reducing inflammation, but can have painful side effects.

Accurate Diagnosis of your condition - The first thing is to get an accurate diagnosis of why you are in pain. Often times sciatica is caused by muscle tension or imbalances which can directly affect the discs and vertebrae in your back which results in an irritated sciatic nerve. Other 'structural' problems with your spine can also cause this irritation and that is why an accurate diagnosis is essential for finding the best treatment.

If pain persists for two to three months and the aforementioned treatments have not worked, surgery may be the most effective solution. Sufferers and their doctors must choose between two surgical procedures performed to relieve the pain of sciatica. These surgeries are elective and effective, relieving 75% to 95% of patients' pain.

However there are ways in which sciatica can be treated and certainly using sciatica exercises can be extremely effective in dealing with this particular problem.

People who suffer from sciatica will often feel pain in their leg which can travel from the back of their thigh up to the thigh and in some cases up to the hip or down towards the foot. For some people not only will they feel pain but they may find that their leg become numb and they will have problems in trying to either move or control their leg.

The intensity and duration of the pain varies with each person, and ranges from an infrequent and slightly irritating sensation to a constant, debilitating pain. It normally affects the lower back and one leg only, but pain may also extend to the feet and toes. Typical "flare-ups" last two weeks to a few months. During these episodes, sufferers have several options for sciatica pain relief.

If pain is severe, a patient may receive an epidural steroid injection. Steroids are injected directly into the painful area around the nerve and greatly reduce inflammation and pain. These injections are temporary and provide sciatic pain relief anywhere from one week to a year.

As the initial sciatica pain sets in, anti-inflammatory medicines may be taken to manage and decrease the pain. Possible medications are ibuprofen drugs such as Nuprin, Motrin, and Advil. COX-2 inhibitors are another option to aid in reducing the pain.

Anti Inflammatory/Pain Relieving Medication - No doubt one of the most important steps to easing your sciatic pain is to reduce any inflammation of the offending area and of course to limit your pain so you can get on with life. Unfortunately this is where the use of NSAID's or non-steroidal anti inflammatory drugs is the road most doctors take. Sure, they may ease your pain and reduce inflammation but if you had any idea of the unwanted effects these drugs can have on you I'm sure you would think twice.

Physiotherapy - this is something that I have not had any success with in dealing with my sciatica, however combined with the right exercises and assuming that your condition is suitable to be treated this way there is no reason not to give it a go. Many doctors see physiotherapy as the first step to easing the problem and once again the blood flow in and around the muscles and loosening of joints may be beneficial to you.

The decision to undergo surgery however depends greatly on the patients decision, with the help and support of the surgeon or with the attending doctor. It is always best to exhaust all forms of sciatica relief treatments before deciding on surgery.

However the actual sciatica exercises a person will use to treat the problem will depend on what the actual cause of the pain is. Plus it is important that you should know that this type of pain can be caused by some other underlying medical condition such as an infection or tumor which will need to be treated as well using the right kind of medical procedures. Ricky Lim recommends natural back pain products such as Eazol for back pain relief. Visit his site today for more back pain products.

So how do we protect ourselves against these problems while still getting the pain relief and reduced inflammation that we need? The answer is natural medicines that do the same job without jeopardizing our future health. There are many great all natural products on the market these days and for peace of mind there really is no other choice.

Many back pain and sciatica sufferers are forced to use these drugs long term, previously myself included, as most back complaints are not easily or quickly resolved. This long term use of NSAID's can have lasting effects on your health. Problems with kidneys, the liver, the intestines and the stomach lining itself are not uncommon and of course add to this the noticeable side effects like cramping, headaches and drowsiness just to mention a few.

Oral steroids for sciatica are also administered in more severe cases. These prescriptions provide pain relief. But take note that such medications can only be used for shorter periods of time only. Oral steroids for herniated disc include Medrol Dose Pak, methylprednisolone, and Predisone.

Stretching exercises are especially good for treating sciatica as they target those muscles which are causing the pain because they have become tense (tight) and not as flexible as they should be. People who take up sciatica exercises find that it helps to strengthen and stretch the back muscles and they can recover much more quickly when they suffer a flare up of sciatica in the future. Plus it has also been found that it actually helps to prevent them from suffering future episodes of sciatica pain.

Give your body a break! For more information on the best all natural pain relievers and anti-inflammatories please head on over to <http://back-pain-products.org> and check out the all natural Heal N Soothe. Your body will thank you for it!

Aside from the oral steroids for sciatica, non-surgical treatments are also widely practiced, like physical therapies and exercises, chiropractic manipulation; cervical traction; activity modification, osteopathic medicine, bracing, medications and injections. Medical professionals who can diagnose above treatments are psychiatrists, family practitioner, osteopathic physician, spine surgeons, neurosurgeons, and neurologists- do not trust the judgment of anyone else. Physical therapists and chiropractors may also administer the non-surgical treatments as mentioned in the first part of this paragraph. The oral steroids for herniated disc should only be given by a healthcare professional, and needs to be accurately assessed before commencing.

Heat and Cold Packs - many people report gaining relief through the use of heat and cold packs particularly where the problem lies with increased muscle tension. Alternating between both hot and cold packs on the affected area has also been reported as a good pain reliever. The hot pack promotes blood flow and can release tensed up muscles and the cold pack helps in reducing the amount of inflammation so you are getting the best of both worlds when alternating between the two.

Exercise is actually extremely important to our spine especially in order to keep the discs within the spine healthy. By carrying out movement a person is actually enable nutrients and fluids to gain access to these discs which in turn ensures that they remain fit and healthy.
